

## **Automatic scheduler for Google Calendar**

## **Problem Summary**

Scheduling meetings is hard for students and event organizers, specifically when they must coordinate with multiple people in the team. Most Google Calendar users do not have their calendars blocked for all their personal and work-related events. Hence, users are unable to use the 'Find a time' feature on Google Calendar. They manually ask for availability of each individual and schedule a time to meet or look for alternate scheduling options online.

	Value Proposition	Project Goals	
	value i reposition	1 Toject Goa	
schedule meetings with the availability and Google Cal available time. Users can s time and much more. After suggested times and Baml	eature offers students and employees a hassle-free way to eir colleagues/teams. All the participants can now fill in their lendar will automatically suggest a meeting based on the earliest et the minimum number of participants, preferred days, location, r participants have filled their availability, just tap on one of the Google Calendar will automatically set up the meeting based on ents. "If it is not efficient, it is not Google Calendar."	The goal of Google Calendar is to make it a <b>One Stop So</b> will allow our users to save the time and hassle of organ with multiple people and teams. We target to build the <b>use' and highly customizable feature</b> and <b>revolutionize</b>	nizing multiple meetings and coordinating e automatic meeting scheduler as an <b>'easy to</b>
	Project Team	Key Metrics	3
Shomali Ghosh Harshi Thaker Kayvon Tari Arihant Vaisraj Shirsha Datta	Product Owner Product Manager Product Designer Project Manager Scrum Master	Number of meetings scheduled using Automatic Meeting Scheduler monitored on a weekly basis. Time spent in end-to-end scheduling - measured to calculating time between various touchpoints in the Automatic Meeting Scheduler  "Find a time" - Button Clickthrough rate  Net time savings - qualitative study and educated guesses On-time performance rating - measured by up-time of the feature  Customer satisfaction (Overall rating) - monitored by providing question prompts to the user after they have used the feature
